Good Websites

PRACTICAL RESOURCE

10-POINT WORKFLOW

CONNECT YOUR WEBSITE TO JANE

A practical booking-path checklist for naturopathic practices

MAKE THE NEXT GOOD MOVE.

Choose the right Jane destination, add useful booking buttons, measure the handoff, and test the complete patient journey before publishing.

10	CHECKS	5	WORK STAGES	1	NEXT MOVE

Choose the booking destination first.

A button works only when it sends the right patient to the right part of Jane.

1 Map the booking paths your website needs

WHY IT MATTERS

List the clinic, location, practitioner, treatment, and private booking destinations patients may need. Publish only services the registrant is authorized and competent to provide at that location.

CHECK FOR

- [ ] Primary patient journey is documented
- [ ] Locations and practitioners are mapped
- [ ] Services match scope and authorization
- [ ] Each CTA has one intended destination

QUICK TEST Can you explain where every booking button should lead?

2 Find the current URLs and button code in Jane

WHY IT MATTERS

Full Access users can find booking URLs and Jane's button embed code under Settings, Branding, and Online Booking Buttons & URLs.

CHECK FOR

- [ ] Primary clinic URL is copied
- [ ] Location-specific URLs are checked
- [ ] Practitioner links are checked
- [ ] Jane button code is saved securely

QUICK TEST Did every link come from the current Jane account?

Add buttons that are clear and usable.

Use Jane's code where it fits, or a normal website button pointing to the correct URL.

3 Choose native website buttons or Jane embed code

WHY IT MATTERS

Website builders often work best with their own button component and a Jane URL. Custom HTML sites can also use Jane's supplied button code.

CHECK FOR

- [ ] Platform capability is understood
- [ ] Button uses a current Jane URL
- [ ] Code is pasted without alteration
- [ ] No full booking page is forced into an iframe

QUICK TEST Is this the simplest reliable button for the platform?

4 Place booking calls-to-action where decisions happen

WHY IT MATTERS

Use a visible booking action in the header, homepage hero, practitioner pages, relevant service pages, and the end of useful patient information.

CHECK FOR

- [ ] Primary CTA appears without scrolling
- [ ] Mobile header includes booking
- [ ] Practitioner pages route correctly
- [ ] CTA wording explains the next step

QUICK TEST Can a mobile visitor reach Jane in two intentional taps?

Route people without removing useful choice.

Deep links reduce friction, but overly narrow links can hide legitimate alternatives.

5 Use practitioner, location, and treatment links intentionally

WHY IT MATTERS

Deep-link when the website page already establishes a clear choice. Use the broader clinic page when the patient still needs to compare options.

CHECK FOR

- [ ] Service pages use relevant destinations
- [ ] Bio pages route to the right practitioner
- [ ] Locations open the matching schedule
- [ ] General CTAs preserve useful choice

QUICK TEST Does the destination match the decision already made?

6 Handle restricted or special booking paths carefully

WHY IT MATTERS

Use Contact to Book, approved booking, or private links only when the clinic workflow requires them. Explain the next step without exposing private options broadly.

CHECK FOR

- [ ] New-patient rules are clear
- [ ] Contact to Book instructions work
- [ ] Private links stay intentionally limited
- [ ] Staff know when manual booking is required

QUICK TEST Will the patient understand what happens if they cannot book?

Measure the website-to-Jane handoff.

Track meaningful steps without assuming an outbound click always becomes an appointment.

7 Track booking-button clicks on the website

WHY IT MATTERS

Create a consistent event for booking-link clicks and record the page, button location, and destination when your analytics setup allows it.

CHECK FOR

- [ ] Booking clicks have one event name
- [ ] Page and destination are captured
- [ ] Events are tested in real time
- [ ] Clicks are not called completed bookings

QUICK TEST Can you tell which pages send people into Jane?

8 Configure Jane measurement separately and responsibly

WHY IT MATTERS

Follow Jane's current GA4 guidance for the online booking site. Consider cross-domain measurement only after ownership, consent, and attribution needs are understood.

CHECK FOR

- [ ] Jane Measurement ID is documented
- [ ] Booked-appointment event is tested
- [ ] Cross-domain needs are reviewed
- [ ] Privacy disclosures match collection

QUICK TEST Can you distinguish website clicks from completed bookings?

Test the complete booking journey.

A correct-looking button can still route to unavailable, hidden, or confusing options.

9 Test every path on mobile and desktop

WHY IT MATTERS

Open each button as a patient, confirm the intended destination, check available options, and complete a controlled test booking when appropriate.

CHECK FOR

- [ ] Every CTA opens successfully
- [ ] Mobile controls are easy to use
- [ ] Correct staff and treatments appear
- [ ] Cancel the controlled test booking

QUICK TEST Did you test the journey rather than only the link?

10 Document ownership and review triggers

WHY IT MATTERS

Record who maintains the links and retest after location, staff, treatment, domain, website, or Jane configuration changes.

CHECK FOR

- [ ] A link inventory is stored
- [ ] An owner is named
- [ ] Change triggers are documented
- [ ] A recurring mobile test is scheduled

QUICK TEST Who will catch a broken booking path next month?

TURN THIS INTO A WORKFLOW

Count the large checkbox on each item you can confidently tick today.

MY READINESS SCORE

____ / 10

Fix one practical gap first.

0-3

Start with access

Resolve ownership, destinations, and essential setup before optimizing.

4-6

Working foundation

Choose the gap most likely to affect patients or reliable measurement.

7-9

Ready to improve

Finish quality assurance and make the workflow repeatable.

10

Ready to maintain

Assign ownership, measure outcomes, and review after meaningful change.

Your first improvement sprint

1. Highest-impact gap: _____

2. Owner + target date: _____

3. How success will be measured: _____
