Good Websites

PRACTICAL RESOURCE

10-POINT WORKFLOW

WEBSITE PHOTOGRAPHY + PERSONAL BRAND

A practical visual-trust checklist for naturopathic practices

MAKE THE NEXT GOOD MOVE.

Plan a useful shot list, create credible headshots and clinic imagery, build a consistent visual presence, and prepare every image for the website.

10 CHECKS	5 WORK STAGES	1 NEXT MOVE

Decide what the images need to communicate.

Photography should answer patient questions and support page layouts, not only look polished.

1 Define the intended feeling and evidence of reality

WHY IT MATTERS

Choose a few grounded qualities such as calm, clear, welcoming, modern, or clinical, then identify the real people and spaces that demonstrate them.

CHECK FOR

- [ ] Three visual qualities are chosen
- [ ] Real practitioner is prioritized
- [ ] Real location is prioritized
- [ ] Style fits the actual experience

QUICK TEST Will the photos set an honest expectation of the practice?

2 Build a page-based shot list

WHY IT MATTERS

List the hero, practitioner, team, exterior, reception, treatment room, working, detail, and wide supporting images each website page needs.

CHECK FOR

- [ ] Homepage needs are listed
- [ ] Each bio has a portrait
- [ ] Location journey is covered
- [ ] Wide and vertical crops are planned

QUICK TEST Does every important page have an intentional image role?

Create natural, credible practitioner portraits.

The goal is recognition and approachability, not an overproduced personal-brand persona.

3 Use simple light, background, posture, and expression

WHY IT MATTERS

Face soft window light or a large diffused source, separate from the background, keep posture natural, and capture several expressions that still feel like the practitioner.

CHECK FOR

- [ ] Eyes are sharp and visible
- [ ] Light is soft and even
- [ ] Background is uncluttered
- [ ] Expression feels natural

QUICK TEST Would a patient recognize this person when they arrive?

4 Capture enough framing and resolution

WHY IT MATTERS

Photograph close portraits, waist-up options, wider environmental portraits, and generous negative space. Use the rear phone camera or a capable camera at full resolution.

CHECK FOR

- [ ] Close and wide options exist
- [ ] Horizontal and vertical frames exist
- [ ] Negative space is intentional
- [ ] Original high-resolution files are saved

QUICK TEST Can the designer crop the image for several screen sizes?

Show the practical patient experience.

Useful clinic imagery reduces uncertainty about arrival, space, and what a visit may feel like.

5 Photograph the arrival and physical environment

WHY IT MATTERS

Capture exterior signage, entrance, parking or transit cues, reception, hallways, treatment rooms, accessibility features, and distinctive spaces accurately.

CHECK FOR

- [ ] Exterior is recognizable
- [ ] Entrance journey is covered
- [ ] Rooms are current and tidy
- [ ] Accessibility details are represented

QUICK TEST Could the images help a first-time patient arrive confidently?

6 Stage working images without exposing patient information

WHY IT MATTERS

Use staff or consenting models, blank screens, clean paperwork, and realistic actions. Never reveal charts, names, schedules, labels, or identifiable patient information.

CHECK FOR

- [ ] Everyone pictured has permission
- [ ] Screens contain no patient data
- [ ] Paperwork is blank or fictional
- [ ] Actions reflect real practice

QUICK TEST Could any person or health information be identified?

Make the person and practice feel coherent.

Consistency comes from repeated choices, not from adding more visual decoration.

7 Coordinate clothing, colour, and setting

WHY IT MATTERS

Choose solid, comfortable clothing and a small palette that works with the website without becoming a uniform. Avoid distracting patterns, temporary trends, or misleading props.

CHECK FOR

- [ ] Clothing feels authentic
- [ ] Colours suit the website palette
- [ ] Patterns are camera-friendly
- [ ] Props relate to the real practice

QUICK TEST Does the styling support the person rather than replace them?

8 Keep the logo and visual system simple

WHY IT MATTERS

Prioritize a readable name, useful typography, restrained colours, and a mark that works small. The logo should identify the practice, not explain every service.

CHECK FOR

- [ ] Name is readable at small sizes
- [ ] One-colour version works
- [ ] Files include vector originals
- [ ] Visual choices stay consistent

QUICK TEST Would the identity still work without decorative effects?

Prepare the images for real web use.

Selection, cropping, accessibility, and file performance determine whether a good shoot becomes a good website.

9 Select for clarity, variety, and honest representation

WHY IT MATTERS

Choose a small final set with consistent colour and useful variation. Limit edits to basic colour and exposure correction; do not alter appearance, imply a clinical result, or depict services not offered.

CHECK FOR

- [ ] Final set serves the shot list
- [ ] No appearance-changing retouching is used
- [ ] Crops protect faces and hands
- [ ] Images represent actual services

QUICK TEST Does each selected image earn its place on a page?

10 Optimize files and write contextual alt text

WHY IT MATTERS

Export appropriately sized WebP or AVIF files, preserve strong originals, and write concise alt text when an image contributes information. Decorative images can use empty alt text.

CHECK FOR

- [ ] Dimensions match intended display
- [ ] Modern compressed formats are used
- [ ] Originals are archived
- [ ] Alt text reflects page context

QUICK TEST Is the image fast and understandable in its page context?

TURN THIS INTO A WORKFLOW

Count the large checkbox on each item you can confidently tick today.

MY READINESS SCORE

____ / 10

Fix one practical gap first.

0-3

Start with access

Resolve ownership, destinations, and essential setup before optimizing.

4-6

Working foundation

Choose the gap most likely to affect patients or reliable measurement.

7-9

Ready to improve

Finish quality assurance and make the workflow repeatable.

10

Ready to maintain

Assign ownership, measure outcomes, and review after meaningful change.

Your first improvement sprint

1. Highest-impact gap: _____

2. Owner + target date: _____

3. How success will be measured: _____
