Good Websites

PRACTICAL RESOURCE

10-POINT WORKFLOW

# CONNECT YOUR WEBSITE TO JANE

A practical booking-path checklist for naturopathic practices

## MAKE THE NEXT GOOD MOVE.

Choose the right Jane destination, add useful booking buttons, measure the handoff, and test the complete patient journey before publishing.

| | | | | | |
|---|---|---|---|---|---|
| 10 | CHECKS | 5 | WORK STAGES | 1 | NEXT MOVE |

# Choose the booking destination first.

A button works only when it sends the right patient to the right part of Jane.

## 1 Map the booking paths your website needs

WHY IT MATTERS

List the clinic, location, practitioner, treatment, and private booking destinations patients may need. Publish only services the registrant is authorized and competent to provide at that location.

CHECK FOR

- [ ] Primary patient journey is documented
- [ ] Locations and practitioners are mapped
- [ ] Services match scope and authorization
- [ ] Each CTA has one intended destination

QUICK TEST Can you explain where every booking button should lead?

## 2 Find the current URLs and button code in Jane

WHY IT MATTERS

Full Access users can find booking URLs and Jane's button embed code under Settings, Branding, and Online Booking Buttons & URLs.

CHECK FOR

- [ ] Primary clinic URL is copied
- [ ] Location-specific URLs are checked
- [ ] Practitioner links are checked
- [ ] Jane button code is saved securely

QUICK TEST Did every link come from the current Jane account?

# Add buttons that are clear and usable.

Use Jane's code where it fits, or a normal website button pointing to the correct URL.

## 3 Choose native website buttons or Jane embed code

WHY IT MATTERS

Website builders often work best with their own button component and a Jane URL. Custom HTML sites can also use Jane's supplied button code.

CHECK FOR

- [ ] Platform capability is understood
- [ ] Button uses a current Jane URL
- [ ] Code is pasted without alteration
- [ ] No full booking page is forced into an iframe

QUICK TEST Is this the simplest reliable button for the platform?

## 4 Place booking calls-to-action where decisions happen

WHY IT MATTERS

Use a visible booking action in the header, homepage hero, practitioner pages, relevant service pages, and the end of useful patient information.

CHECK FOR

- [ ] Primary CTA appears without scrolling
- [ ] Mobile header includes booking
- [ ] Practitioner pages route correctly
- [ ] CTA wording explains the next step

QUICK TEST Can a mobile visitor reach Jane in two intentional taps?

# Route people without removing useful choice.

Deep links reduce friction, but overly narrow links can hide legitimate alternatives.

## 5 Use practitioner, location, and treatment links intentionally

WHY IT MATTERS

Deep-link when the website page already establishes a clear choice. Use the broader clinic page when the patient still needs to compare options.

CHECK FOR

- [ ] Service pages use relevant destinations
- [ ] Bio pages route to the right practitioner
- [ ] Locations open the matching schedule
- [ ] General CTAs preserve useful choice

QUICK TEST Does the destination match the decision already made?

## 6 Handle restricted or special booking paths carefully

WHY IT MATTERS

Use Contact to Book, approved booking, or private links only when the clinic workflow requires them. Explain the next step without exposing private options broadly.

CHECK FOR

- [ ] New-patient rules are clear
- [ ] Contact to Book instructions work
- [ ] Private links stay intentionally limited
- [ ] Staff know when manual booking is required

QUICK TEST Will the patient understand what happens if they cannot book?

# Measure the website-to-Jane handoff.

Track meaningful steps without assuming an outbound click always becomes an appointment.

## 7 Track booking-button clicks on the website

WHY IT MATTERS

Create a consistent event for booking-link clicks and record the page, button location, and destination when your analytics setup allows it.

CHECK FOR

- [ ] Booking clicks have one event name
- [ ] Page and destination are captured
- [ ] Events are tested in real time
- [ ] Clicks are not called completed bookings

QUICK TEST Can you tell which pages send people into Jane?

## 8 Configure Jane measurement separately and responsibly

WHY IT MATTERS

Follow Jane's current GA4 guidance for the online booking site. Consider cross-domain measurement only after ownership, consent, and attribution needs are understood.

CHECK FOR

- [ ] Jane Measurement ID is documented
- [ ] Booked-appointment event is tested
- [ ] Cross-domain needs are reviewed
- [ ] Privacy disclosures match collection

QUICK TEST Can you distinguish website clicks from completed bookings?

# Test the complete booking journey.

A correct-looking button can still route to unavailable, hidden, or confusing options.

## 9 Test every path on mobile and desktop

WHY IT MATTERS

Open each button as a patient, confirm the intended destination, check available options, and complete a controlled test booking when appropriate.

CHECK FOR

- [ ] Every CTA opens successfully
- [ ] Mobile controls are easy to use
- [ ] Correct staff and treatments appear
- [ ] Cancel the controlled test booking

QUICK TEST Did you test the journey rather than only the link?

## 10 Document ownership and review triggers

WHY IT MATTERS

Record who maintains the links and retest after location, staff, treatment, domain, website, or Jane configuration changes.

CHECK FOR

- [ ] A link inventory is stored
- [ ] An owner is named
- [ ] Change triggers are documented
- [ ] A recurring mobile test is scheduled

QUICK TEST Who will catch a broken booking path next month?

# TURN THIS INTO A WORKFLOW

Count the large checkbox on each item you can confidently tick today.

PRACTICAL RESOURCE

10-POINT WORKFLOW

# JANE ACCOUNT + ONLINE BOOKING SETUP

A structure checklist for solo NDs, teams, and multiple locations

## MAKE THE NEXT GOOD MOVE.

Choose the right account model, organize locations and practitioners, control what appears online, and protect the practice as it changes.

| | | | | | |
|---|---|---|---|---|---|
| 10 | CHECKS | 5 | WORK STAGES | 1 | NEXT MOVE |

# Start with how the practice really operates.

Ownership, shared records, branding, administration, and future separation matter more than convenience today.

## 1 Map ownership, administration, and patient records

WHY IT MATTERS

Document who owns the business, controls the Jane account, employs or contracts practitioners, administers billing, and is responsible for records.

CHECK FOR

- [ ] Legal owner is identified
- [ ] Account Owner is confirmed
- [ ] Admin responsibilities are mapped
- [ ] Record custody is understood

QUICK TEST Could the clinic explain who controls each part of Jane?

## 2 Choose locations or separate Jane accounts

WHY IT MATTERS

Jane generally points shared-brand, shared-patient operations toward locations in one account, and independently operated practices toward separate accounts.

CHECK FOR

- [ ] Brand and patient sharing are reviewed
- [ ] Practitioner independence is considered
- [ ] Future sale or separation is considered
- [ ] Jane Support is consulted when unclear

QUICK TEST Would the structure still work if a practitioner leaves?

# Build locations, practitioners, and services deliberately

Availability depends on several connected settings, not one online-booking switch.

## 3 Configure each active location completely

WHY IT MATTERS

Add the correct address, billing details, online visibility, payments configuration, and display order for every simultaneously active location.

CHECK FOR

- [ ] Location details are accurate
- [ ] Online visibility is intentional
- [ ] Billing information is correct
- [ ] Payments setup covers the location

QUICK TEST Can a patient identify the correct location confidently?

## 4 Connect staff, treatments, and shifts by location

WHY IT MATTERS

Opt each practitioner into the right locations, assign accurately named services they are authorized and competent to provide there, create matching shifts, and test anything that limits availability.

CHECK FOR

- [ ] Staff are opted into correct locations
- [ ] Services match scope and authorization
- [ ] Shifts match real schedules
- [ ] Tags and resources are tested

QUICK TEST Does every intended opening actually appear online?

# Control what patients see and choose.

Clinic-wide rules and individual practitioner preferences must work together.

## 5 Set clinic-wide online booking rules

WHY IT MATTERS

Review same-day booking, minimum notice, cancellations, appointment limits, display preferences, contact details, and whether patients browse by treatment or staff.

CHECK FOR

- [ ] Notice periods match operations
- [ ] Cancellation settings are current
- [ ] Appointment limits are intentional
- [ ] Browse options suit the clinic

QUICK TEST Do clinic-wide rules match what staff tell patients?

## 6 Configure each practitioner's online preferences

WHY IT MATTERS

Confirm whether each practitioner appears online, which treatments and locations are offered, rolling availability, display order, and any individual restrictions.

CHECK FOR

- [ ] Online booking is enabled intentionally
- [ ] Treatments and locations are correct
- [ ] Rolling availability is appropriate
- [ ] Monthly view shows useful openings

QUICK TEST Does each practitioner see the experience they expect?

# Design for real patient situations.

New patients, returning patients, virtual care, and multiple time zones may need different instructions.

## 7 Separate new, returning, and special booking paths

WHY IT MATTERS

Decide which patients can book online, which treatments require contact, and when approved or private booking links are appropriate.

CHECK FOR

- [ ] New-patient access is defined
- [ ] Returning-patient options are clear
- [ ] Contact to Book is explained
- [ ] Private links have an owner

QUICK TEST Can every patient type find a valid next step?

## 8 Make location and time-zone information unambiguous

WHY IT MATTERS

Show physical, virtual, mobile, and time-zone information accurately. For virtual care, confirm where the patient will be located and whether the registrant may legally practise in that jurisdiction.

CHECK FOR

- [ ] Location display is intentional
- [ ] Virtual-care eligibility is clear
- [ ] Patient jurisdiction is confirmed
- [ ] Time zone and instructions are accurate

QUICK TEST Could anyone arrive at the wrong place or time?

# Protect access, continuity, and future change.

The best setup is usable now and survivable when owners, practitioners, or locations change.

## 9 Set permissions and exit procedures

WHY IT MATTERS

Use the lowest suitable access level, document who can change critical settings, and understand what can and cannot move if accounts separate later.

CHECK FOR

- [ ] Access levels match responsibilities
- [ ] Critical changes have owners
- [ ] Departure steps are documented
- [ ] Export limitations are understood

QUICK TEST Could access be removed cleanly without losing control?

## 10 Test every location and practitioner as a patient

WHY IT MATTERS

Review the live booking site, use Jane's availability tools, test representative scenarios, and repeat after any major configuration change.

CHECK FOR

- [ ] Solo path is tested
- [ ] Each location is tested
- [ ] Each practitioner is tested
- [ ] No-availability cases are understood

QUICK TEST Did the team test every structure it created?

# TURN THIS INTO A WORKFLOW

Count the large checkbox on each item you can confidently tick today.

Good Websites

PRACTICAL RESOURCE

10-POINT WORKFLOW

# ANALYTICS + SEARCH CONSOLE SETUP

A measurement foundation checklist for naturopathic practices

## MAKE THE NEXT GOOD MOVE.

Own the accounts, install GA4, verify Search Console, submit the sitemap, connect Jane measurement, and test the data before relying on it.

| | | | | | |
|---|---|---|---|---|---|
| 10 | CHECKS | 5 | WORK STAGES | 1 | NEXT MOVE |

# Make the practice the permanent owner.

Measurement accounts should survive a website vendor, employee, or contractor change.

## 1 Use a practice-controlled Google account

WHY IT MATTERS

Create or confirm business-owned access, add trusted administrators, enable recovery and security, and avoid leaving ownership with a vendor's personal account.

CHECK FOR

- [ ] Practice controls the primary login
- [ ] Two administrators are available
- [ ] Recovery details are current
- [ ] Vendor access is role-based

QUICK TEST Could the practice retain access if the vendor disappeared?

## 2 Define the actions worth measuring

WHY IT MATTERS

Choose a small set of meaningful actions before installing tools: booking clicks, completed bookings when available, calls, forms, directions, and resource signups.

CHECK FOR

- [ ] Primary business outcome is named
- [ ] Key actions are documented
- [ ] Event names are consistent
- [ ] Vanity metrics are secondary

QUICK TEST Will the data answer a real business question?

# Install GA4 and verify collection.

A property, web data stream, and working Google tag are the basic chain.

## 3 Create the GA4 property and web data stream

WHY IT MATTERS

Set the correct business name, reporting time zone, and currency. Create one suitable web data stream and record its Measurement ID.

CHECK FOR

- [ ] Property belongs to the right business
- [ ] Time zone and currency are correct
- [ ] Web stream uses the canonical URL
- [ ] Measurement ID is documented

QUICK TEST Are you collecting into the property you intend to keep?

## 4 Install the tag and test meaningful events

WHY IT MATTERS

Use the site's supported integration, Google Tag Manager, or the Google tag. Test page views and key actions in Realtime before declaring setup complete.

CHECK FOR

- [ ] Tag loads on intended pages
- [ ] Realtime shows a controlled visit
- [ ] Key events fire once as designed
- [ ] Internal test traffic is recognizable

QUICK TEST Can you see your own controlled journey in Realtime?

# Verify the complete website property.

Search Console reveals how Google discovers, indexes, and displays the site.

## 5 Add and verify the appropriate property

WHY IT MATTERS

A Domain property usually provides the broadest view across protocols and subdomains, but it requires DNS verification. Use the property type that matches access and scope.

CHECK FOR

- [ ] Canonical domain is confirmed
- [ ] Property type is intentional
- [ ] DNS ownership is verified
- [ ] Practice administrators are added

QUICK TEST Does the property cover every live version of the domain?

## 6 Link Search Console and Analytics where useful

WHY IT MATTERS

Link the correct Search Console property to the correct GA4 property so organic queries and landing-page reporting can be analyzed together.

CHECK FOR

- [ ] Both properties are verified
- [ ] Correct web stream is selected
- [ ] Required permissions are available
- [ ] Link appears in both products

QUICK TEST Did you connect the right site to the right property?

# Help Google find the preferred pages.

A sitemap is a discovery aid, not a guarantee that every URL will be indexed.

## 7 Locate or generate the canonical XML sitemap

WHY IT MATTERS

Use the CMS-generated sitemap when reliable. Include absolute, canonical, indexable URLs and keep test, redirect, duplicate, and private URLs out.

CHECK FOR

- [ ] Sitemap returns a successful response
- [ ] URLs are absolute and canonical
- [ ] Private or test pages are excluded
- [ ] New resources are added automatically

QUICK TEST Does the sitemap list only pages you want in search?

## 8 Submit the sitemap and inspect key URLs

WHY IT MATTERS

Submit the sitemap in Search Console, monitor processing errors, and use URL Inspection for the homepage and important service, location, and resource pages.

CHECK FOR

- [ ] Sitemap status is successful
- [ ] Important URLs are discovered
- [ ] Live inspection can fetch pages
- [ ] Canonical selection is reviewed

QUICK TEST Can Google fetch and understand your priority pages?

# Connect booking measurement and maintain it.

The booking site and the main website may require distinct configuration and careful attribution.

## 9 Follow Jane's current analytics setup guidance

WHY IT MATTERS

Configure the Measurement ID under Jane Settings and Integrations, create a booked-appointment event as documented, and review whether cross-domain measurement is appropriate.

CHECK FOR

- [ ] Jane Measurement ID is entered
- [ ] Booking event is configured
- [ ] Processing delay is expected
- [ ] Cross-domain setup is tested

QUICK TEST Can a controlled booking create the expected event?

## 10 Document privacy, access, and monthly checks

WHY IT MATTERS

Keep a measurement inventory, align consent and privacy disclosures with collection, and prevent names, contact details, appointment details, form values, or other personal health information from entering analytics.

CHECK FOR

- [ ] Privacy disclosure matches tools
- [ ] No personal health information is collected
- [ ] Access list is reviewed
- [ ] Monthly health check has an owner

QUICK TEST Who will notice when measurement quietly stops?

# TURN THIS INTO A WORKFLOW

Count the large checkbox on each item you can confidently tick today.

Good Websites

PRACTICAL RESOURCE

10-POINT WORKFLOW

# INTERPRET YOUR WEBSITE DATA

A monthly decision checklist for small naturopathic practices

## MAKE THE NEXT GOOD MOVE.

Turn Analytics, Search Console, and Jane signals into a short list of useful decisions instead of collecting dashboards you never use.

| | | | | | |
|---|---|---|---|---|---|
| 10 | CHECKS | 5 | WORK STAGES | 1 | NEXT MOVE |

# Start with decisions, not dashboards.

Measurement is useful when it changes what the practice does next.

## 1 Choose one business question for the review

WHY IT MATTERS

Examples include which pages lead to booking, which services attract local search demand, or whether mobile visitors reach the booking flow.

CHECK FOR

- [ ] Question relates to a practice goal
- [ ] Relevant time period is chosen
- [ ] Needed data sources are available
- [ ] A possible decision is defined

QUICK TEST What will you do differently after seeing the answer?

## 2 Use comparable periods and add context

WHY IT MATTERS

Compare similar periods, annotate launches or outages, and account for seasonality, holidays, practitioner availability, campaigns, and tracking changes.

CHECK FOR

- [ ] Periods are genuinely comparable
- [ ] Major changes are annotated
- [ ] Seasonality is considered
- [ ] Tracking changes are separated

QUICK TEST Could the change come from operations rather than marketing?

# Find where useful visits begin and end.

Traffic volume alone says little about whether the right people found the right page.

## 3 Review acquisition and landing pages together

WHY IT MATTERS

Compare source and medium with the first page visited. Look for channels that bring relevant local visitors to services, practitioners, resources, and booking pages.

CHECK FOR

- [ ] Source and medium are reviewed
- [ ] Top landing pages are identified
- [ ] Local and mobile segments are checked
- [ ] Irrelevant traffic is recognized

QUICK TEST Are the right visitors arriving on the right pages?

## 4 Measure meaningful actions after arrival

WHY IT MATTERS

Review booking clicks, calls, forms, directions, downloads, and aggregate completed-booking totals when lawfully available. Do not send patient identity, appointment details, or form content to analytics.

CHECK FOR

- [ ] Key events are reliable
- [ ] Actions are compared by page
- [ ] Clicks differ from completed bookings
- [ ] No patient details enter analytics

QUICK TEST Did visitors take a useful next step?

# Read Search Console as a demand signal.

Clicks, impressions, CTR, and average position describe different parts of search visibility.

## 5 Interpret each search metric accurately

WHY IT MATTERS

Impressions show visibility, clicks show visits, CTR divides clicks by impressions, and average position is an averaged relative placement - not a fixed rank.

CHECK FOR

- [ ] Metrics are not used interchangeably
- [ ] Page and query views are separated
- [ ] Trends matter more than one day
- [ ] Position is treated as approximate

QUICK TEST Can you explain the metric without calling it traffic?

## 6 Find pages with a realistic next improvement

WHY IT MATTERS

Look for relevant queries gaining impressions, pages with visibility but weak clicks, declining priority pages, and multiple pages competing for the same intent.

CHECK FOR

- [ ] Queries match intended patients
- [ ] High-impression pages are reviewed
- [ ] CTR changes are investigated
- [ ] Competing pages are identified

QUICK TEST Is there one clear page you can improve this month?

# Connect attention to appointment behaviour.

Website and Jane data may show different steps, especially when domains or properties are separate.

## 7 Separate booking interest from completed bookings

WHY IT MATTERS

An outbound Jane click shows intent, not a completed appointment. Compare website booking clicks with Jane booking events and operational booking data carefully.

CHECK FOR

- [ ] Booking clicks are clearly named
- [ ] Completed booking event is validated
- [ ] Attribution gaps are documented
- [ ] Totals are not forced to match

QUICK TEST Are you reporting interest or actual appointments?

## 8 Segment the journey before changing the site

WHY IT MATTERS

Compare mobile and desktop, new and returning visitors, landing pages, locations, and practitioner paths to find where friction is concentrated.

CHECK FOR

- [ ] Mobile path is reviewed
- [ ] New visitors are separated
- [ ] Location paths are compared
- [ ] Low-volume segments are treated cautiously

QUICK TEST Is the problem site-wide or limited to one journey?

# Make one measured improvement at a time.

Small practices learn faster when changes are focused and documented.

## 9 Write a hypothesis before making the change

WHY IT MATTERS

State the observed problem, the proposed change, the metric expected to move, and the review date. Avoid changing many connected elements at once.

CHECK FOR

- [ ] Observation is documented
- [ ] Change is specific
- [ ] Success metric is named
- [ ] Review date allows enough data

QUICK TEST Will you know whether this specific change helped?

## 10 Maintain a one-page monthly scorecard

WHY IT MATTERS

Record a few stable metrics, important context, one insight, one action, and one owner. Keep the scorecard consistent enough to reveal trends.

CHECK FOR

- [ ] Metrics stay intentionally limited
- [ ] Context notes are included
- [ ] One action is assigned
- [ ] Previous actions are reviewed

QUICK TEST Can the team understand the month in five minutes?

# TURN THIS INTO A WORKFLOW

Count the large checkbox on each item you can confidently tick today.

Good Websites

PRACTICAL RESOURCE

10-POINT WORKFLOW

# PATIENT-QUESTION CONTENT RESEARCH

A search-listening checklist for useful naturopathic content

## MAKE THE NEXT GOOD MOVE.

Find the questions people actually ask, understand the intent behind them, inspect what already ranks, and build a more useful content plan.

| | | | | | |
|---|---|---|---|---|---|
| 10 | CHECKS | 5 | WORK STAGES | 1 | NEXT MOVE |

# Begin with the practice, patient, and place.

Good research starts with specific services and real patient language, not a blank keyword tool.

## 1 Define the patient and business context

WHY IT MATTERS

Choose the location, patient group, area of focus, appointment type, and practical business goal the research should support.

CHECK FOR

- [ ] Location is specific
- [ ] Patient group is understood
- [ ] Area of focus is accurate
- [ ] Content goal is named

QUICK TEST Who should find this content, and what do they need?

## 2 Build a varied seed-term list

WHY IT MATTERS

Combine naturopath terms with cost, first visit, near me, city, insurance, direct billing, virtual care, and accurate areas of focus. Use observed patterns as starting points, not volume estimates.

CHECK FOR

- [ ] What does a naturopath do?
- [ ] First naturopath appointment
- [ ] Perimenopause or fertility questions
- [ ] Near-me or direct-billing questions

QUICK TEST Does the list sound like patients rather than marketers?

# Collect questions from several real sources.

No single tool captures the full language of the people a practice serves.

## 3 Use search-listening and autocomplete tools

WHY IT MATTERS

Run focused seeds through AnswerThePublic and search autocomplete. Export questions and comparisons, but do not treat suggestions as verified search volume.

CHECK FOR

- [ ] Country and language are selected
- [ ] Several seed variations are used
- [ ] Questions are exported
- [ ] Volume claims are not invented

QUICK TEST Are these observed queries rather than brainstormed topics?

## 4 Add first-party questions from the practice

WHY IT MATTERS

Review Search Console queries, intake questions, calls, email, booking friction, and common appointment explanations while protecting patient privacy.

CHECK FOR

- [ ] Search Console queries are reviewed
- [ ] Staff questions are collected
- [ ] Booking friction is noted
- [ ] Patient details are removed

QUICK TEST What do patients repeatedly ask before they book?

# Understand what the searcher wants next.

A useful page matches the job behind the words, not only the phrase itself.

## 5 Classify each question by intent

WHY IT MATTERS

Group questions into understand, compare, prepare, find local care, or book. Different intentions may require an article, FAQ, service page, location page, or booking guide.

CHECK FOR

- [ ] Intent is assigned
- [ ] Best page type is chosen
- [ ] Local intent is separated
- [ ] Booking intent receives a clear next step

QUICK TEST What would a satisfying answer help the person do?

## 6 Filter for scope, evidence, and practice relevance

WHY IT MATTERS

Remove topics the practitioner cannot address responsibly or support. The topic must fit actual services, scope, competence, and Ontario advertising rules; search demand never authorizes a claim.

CHECK FOR

- [ ] Topic fits actual services and scope
- [ ] Claims can be supported
- [ ] Search wording is not copied blindly
- [ ] Patient safety is protected

QUICK TEST Should this practice be the one answering this question?

# Study what already ranks, then improve it.

The goal is not to rewrite three articles; it is to find the unanswered need they reveal.

## 7 Review the leading results with a gap worksheet

WHY IT MATTERS

Inspect several relevant results for format, clarity, evidence, missing questions, local usefulness, practitioner context, freshness, and unnecessary friction.

CHECK FOR

- [ ] Several results are reviewed
- [ ] Common sections are noted
- [ ] Weak or missing answers are listed
- [ ] Sources and dates are checked

QUICK TEST What would make a reader continue searching after these pages?

## 8 Create a genuinely better content brief

WHY IT MATTERS

Plan a clearer direct answer, stronger sources, original professional context, useful next steps, related questions, and a structure suited to the searcher's intent.

CHECK FOR

- [ ] Direct answer is planned
- [ ] Original value is identified
- [ ] Evidence needs are listed
- [ ] Next step is useful and proportionate

QUICK TEST Is the proposed page better in a specific, defensible way?

# Turn research into a patient-first roadmap.

A smaller set of supported, connected pages is better than a pile of disconnected ideas.

## 9 Prioritize by fit, usefulness, and effort

WHY IT MATTERS

Score topics using patient relevance, service fit, evidence availability, business value, existing authority, and realistic production effort - not volume alone.

CHECK FOR

- [ ] Patient value is weighted highly
- [ ] Service fit is required
- [ ] Evidence workload is estimated
- [ ] Effort and ownership are realistic

QUICK TEST Would this still be worth publishing with modest traffic?

## 10 Build clusters and review the language over time

WHY IT MATTERS

Connect one substantial page with related questions, services, practitioner information, and booking guidance. Revisit Search Console and search-listening sources after publication.

CHECK FOR

- [ ] Primary page is identified
- [ ] Supporting questions are grouped
- [ ] Internal links are planned
- [ ] Review date and owner are assigned

QUICK TEST Does each new page strengthen a useful body of knowledge?

# TURN THIS INTO A WORKFLOW

Count the large checkbox on each item you can confidently tick today.

10-POINT WORKFLOW

# SEO + AEO CONTENT WRITING

A trustworthy article workflow for naturopathic practices

## MAKE THE NEXT GOOD MOVE.

Turn a real patient question into a clear, well-supported, original page that works for people first and gives search systems useful context.

| | | | | | |
|---|---|---|---|---|---|
| 10 | CHECKS | 5 | WORK STAGES | 1 | NEXT MOVE |

# Give every page one clear job.

A focused brief prevents a useful article from becoming a vague collection of keywords.

## 1 Choose one real question and primary intent

WHY IT MATTERS

Define the exact question, intended reader, location context, and whether the page should educate, compare, prepare, or help someone take a next step.

CHECK FOR

- [ ] Question comes from observed demand
- [ ] Reader is specific
- [ ] Primary intent is named
- [ ] Page type matches the intent

QUICK TEST Can you describe the page's job in one sentence?

## 2 Plan the direct answer before the full outline

WHY IT MATTERS

Write the shortest accurate answer first, then list the context, limits, related questions, evidence, and practical next steps required to make it useful.

CHECK FOR

- [ ] Direct answer is drafted
- [ ] Necessary context is listed
- [ ] Limitations are included
- [ ] Evidence needs are identified

QUICK TEST Could a reader understand the main answer immediately?

# Make the answer easy to scan and extract.

Clear hierarchy helps patients, editors, search engines, and answer systems understand the page.

## 3 Use a descriptive title and logical headings

WHY IT MATTERS

Create one accurate H1 and organize the page with headings that describe the questions or decisions addressed. Avoid clever headings that hide the topic.

CHECK FOR

- [ ] H1 states the subject clearly
- [ ] Headings follow a logical order
- [ ] Questions use patient language
- [ ] No heading exists only for keywords

QUICK TEST Does the heading outline make sense without the paragraphs?

## 4 Answer important questions in concise blocks

WHY IT MATTERS

Open each section with a direct response, then explain nuance, evidence, options, and limits. Use lists or tables only when they improve comprehension.

CHECK FOR

- [ ] Answer precedes background
- [ ] Paragraphs stay focused
- [ ] Lists simplify real choices
- [ ] Important qualifications remain visible

QUICK TEST Can a reader find the answer without hunting through prose?

# Support health information responsibly.

Health content requires stronger evidence, authorship, and advertising discipline than ordinary marketing copy.

## 5 Use primary and authoritative sources near claims

WHY IT MATTERS

Support important statements with appropriate guidance, reviews, or research. Link to original sources when possible and distinguish evidence from professional perspective.

CHECK FOR

- [ ] Important claims have support
- [ ] Sources match the claim
- [ ] Original sources are preferred
- [ ] Evidence and opinion are distinguished

QUICK TEST Can a careful reader trace the claim to its support?

## 6 Apply Ontario advertising rules before publishing

WHY IT MATTERS

Use the registrant's correct name and title with factual, verifiable, non-misleading language. Avoid testimonials, review promotion, unsupported outcomes, guarantees, superlatives, and terms implying a recognized specialization.

CHECK FOR

- [ ] Claims are factual and verifiable
- [ ] Name and title follow CONO rules
- [ ] No testimonials are used
- [ ] No guarantee or specialty claim appears

QUICK TEST Would the wording remain accurate under regulatory review?

# Make the page discoverable without distorting it.

Basic SEO supports distribution; it does not replace a useful answer.

## 7 Write useful metadata and internal links

WHY IT MATTERS

Use a unique title and description that represent the page honestly. Link naturally to relevant services, practitioner information, related resources, and an appropriate next step.

CHECK FOR

- [ ] Title is unique and descriptive
- [ ] Description sets accurate expectations
- [ ] Internal anchors are specific
- [ ] Related pages link back when useful

QUICK TEST Do the search preview and links accurately describe the page?

## 8 Use structured data only when it matches the page

WHY IT MATTERS

Add supported Article, breadcrumb, organization, or other relevant markup that reflects visible content. Do not treat FAQ markup or schema as a citation guarantee.

CHECK FOR

- [ ] Markup describes visible content
- [ ] Author and dates are accurate
- [ ] Required properties are valid
- [ ] No rich-result outcome is promised

QUICK TEST Would the markup still be truthful if read aloud?

# Add original value and maintain it.

A trustworthy page reflects accountable authorship and improves when evidence or patient needs change.

## 9 Add professional value beyond the current results

WHY IT MATTERS

Contribute a clearer framework, better explanation, local process, practical preparation, decision points, or identifiable professional perspective without exposing patient information.

CHECK FOR

- [ ] Original contribution is specific
- [ ] Examples protect privacy
- [ ] Automation is reviewed by a human
- [ ] Author qualifications fit the topic

QUICK TEST What useful value exists here that was missing elsewhere?

## 10 Edit, publish, measure, and review honestly

WHY IT MATTERS

Check accuracy, clarity, links, accessibility, metadata, and mobile rendering. Show meaningful created or reviewed dates and update the page when the content actually changes.

CHECK FOR

- [ ] Clinical and editorial review are complete
- [ ] Mobile page is tested
- [ ] Dates describe real work
- [ ] Performance review has an owner

QUICK TEST Who is accountable for the next accuracy review?

Good Websites

PRACTICAL RESOURCE

10-POINT WORKFLOW

# WEBSITE PHOTOGRAPHY + PERSONAL BRAND

A practical visual-trust checklist for naturopathic practices

## MAKE THE NEXT GOOD MOVE.

Plan a useful shot list, create credible headshots and clinic imagery, build a consistent visual presence, and prepare every image for the website.

| | | |
|---|---|---|
| 10 CHECKS | 5 WORK STAGES | 1 NEXT MOVE |

# Decide what the images need to communicate.

Photography should answer patient questions and support page layouts, not only look polished.

## 1 Define the intended feeling and evidence of reality

WHY IT MATTERS

Choose a few grounded qualities such as calm, clear, welcoming, modern, or clinical, then identify the real people and spaces that demonstrate them.

CHECK FOR

- [ ] Three visual qualities are chosen
- [ ] Real practitioner is prioritized
- [ ] Real location is prioritized
- [ ] Style fits the actual experience

QUICK TEST Will the photos set an honest expectation of the practice?

## 2 Build a page-based shot list

WHY IT MATTERS

List the hero, practitioner, team, exterior, reception, treatment room, working, detail, and wide supporting images each website page needs.

CHECK FOR

- [ ] Homepage needs are listed
- [ ] Each bio has a portrait
- [ ] Location journey is covered
- [ ] Wide and vertical crops are planned

QUICK TEST Does every important page have an intentional image role?

# Create natural, credible practitioner portraits.

The goal is recognition and approachability, not an overproduced personal-brand persona.

## 3 Use simple light, background, posture, and expression

WHY IT MATTERS

Face soft window light or a large diffused source, separate from the background, keep posture natural, and capture several expressions that still feel like the practitioner.

CHECK FOR

- [ ] Eyes are sharp and visible
- [ ] Light is soft and even
- [ ] Background is uncluttered
- [ ] Expression feels natural

QUICK TEST Would a patient recognize this person when they arrive?

## 4 Capture enough framing and resolution

WHY IT MATTERS

Photograph close portraits, waist-up options, wider environmental portraits, and generous negative space. Use the rear phone camera or a capable camera at full resolution.

CHECK FOR

- [ ] Close and wide options exist
- [ ] Horizontal and vertical frames exist
- [ ] Negative space is intentional
- [ ] Original high-resolution files are saved

QUICK TEST Can the designer crop the image for several screen sizes?

# Show the practical patient experience.

Useful clinic imagery reduces uncertainty about arrival, space, and what a visit may feel like.

## 5 Photograph the arrival and physical environment

WHY IT MATTERS

Capture exterior signage, entrance, parking or transit cues, reception, hallways, treatment rooms, accessibility features, and distinctive spaces accurately.

CHECK FOR

- [ ] Exterior is recognizable
- [ ] Entrance journey is covered
- [ ] Rooms are current and tidy
- [ ] Accessibility details are represented

QUICK TEST Could the images help a first-time patient arrive confidently?

## 6 Stage working images without exposing patient information

WHY IT MATTERS

Use staff or consenting models, blank screens, clean paperwork, and realistic actions. Never reveal charts, names, schedules, labels, or identifiable patient information.

CHECK FOR

- [ ] Everyone pictured has permission
- [ ] Screens contain no patient data
- [ ] Paperwork is blank or fictional
- [ ] Actions reflect real practice

QUICK TEST Could any person or health information be identified?

# Make the person and practice feel coherent.

Consistency comes from repeated choices, not from adding more visual decoration.

## 7 Coordinate clothing, colour, and setting

WHY IT MATTERS

Choose solid, comfortable clothing and a small palette that works with the website without becoming a uniform. Avoid distracting patterns, temporary trends, or misleading props.

CHECK FOR

- [ ] Clothing feels authentic
- [ ] Colours suit the website palette
- [ ] Patterns are camera-friendly
- [ ] Props relate to the real practice

QUICK TEST Does the styling support the person rather than replace them?

## 8 Keep the logo and visual system simple

WHY IT MATTERS

Prioritize a readable name, useful typography, restrained colours, and a mark that works small. The logo should identify the practice, not explain every service.

CHECK FOR

- [ ] Name is readable at small sizes
- [ ] One-colour version works
- [ ] Files include vector originals
- [ ] Visual choices stay consistent

QUICK TEST Would the identity still work without decorative effects?

# Prepare the images for real web use.

Selection, cropping, accessibility, and file performance determine whether a good shoot becomes a good website.

## 9 Select for clarity, variety, and honest representation

WHY IT MATTERS

Choose a small final set with consistent colour and useful variation. Limit edits to basic colour and exposure correction; do not alter appearance, imply a clinical result, or depict services not offered.

CHECK FOR

- [ ] Final set serves the shot list
- [ ] No appearance-changing retouching is used
- [ ] Crops protect faces and hands
- [ ] Images represent actual services

QUICK TEST Does each selected image earn its place on a page?

## 10 Optimize files and write contextual alt text

WHY IT MATTERS

Export appropriately sized WebP or AVIF files, preserve strong originals, and write concise alt text when an image contributes information. Decorative images can use empty alt text.

CHECK FOR

- [ ] Dimensions match intended display
- [ ] Modern compressed formats are used
- [ ] Originals are archived
- [ ] Alt text reflects page context

QUICK TEST Is the image fast and understandable in its page context?

# TURN THIS INTO A WORKFLOW

Good Websites

PRACTICAL RESOURCE

10-POINT WORKFLOW

# TRAFFIC + GOOGLE ADS FUNDAMENTALS

A cautious acquisition checklist for naturopathic practices

## MAKE THE NEXT GOOD MOVE.

Understand organic, paid, social, referral, and email traffic; prepare the destination and measurement; then test paid search with controlled risk.

| | | | | | |
|---|---|---|---|---|---|
| 10 | CHECKS | 5 | WORK STAGES | 1 | NEXT MOVE |

# Choose the right way to earn attention.

Organic, paid, social, referral, and email traffic create different expectations and compound differently.

## 1 Understand what each channel is good at

WHY IT MATTERS

Organic search compounds slowly, paid search buys visibility, social builds familiarity, referrals create introductions, and consented email supports an existing relationship without direct patient solicitation.

CHECK FOR

- [ ] Channel strengths are understood
- [ ] Time horizon is realistic
- [ ] Audience intent is considered
- [ ] Email consent and professional rules are respected

QUICK TEST Does the channel match how quickly and why people act?

## 2 Choose one primary outcome and audience

WHY IT MATTERS

Define the location, patient need, service, appointment type, capacity, and action the campaign or content should support before selecting tactics.

CHECK FOR

- [ ] Audience is geographically realistic
- [ ] Service has available capacity
- [ ] Primary action is measurable
- [ ] Economics are understood

QUICK TEST Who should arrive, and what should they do next?

# Prepare the page before increasing traffic.

Buying or earning more visits magnifies whatever is already clear or confusing on the page.

## 3 Send each audience to a focused landing page

WHY IT MATTERS

Match the page to the search or message with clear location, practitioner identity, service information, fees or process where appropriate, and one primary next step.

CHECK FOR

- [ ] Message matches the traffic source
- [ ] Page loads well on mobile
- [ ] Trust information is verifiable
- [ ] Primary CTA reaches the right booking path

QUICK TEST Does the page continue the exact conversation that began?

## 4 Set up conversion measurement before launch

WHY IT MATTERS

Track the most meaningful available actions, verify them with controlled tests, and distinguish website interactions from completed Jane appointments.

CHECK FOR

- [ ] Primary conversion is configured
- [ ] Booking clicks are named accurately
- [ ] Calls or forms are tested
- [ ] Privacy disclosures match collection

QUICK TEST Can you tell whether the traffic created a useful action?

# Build a narrow, understandable first campaign.

Begin with high-intent searches and local constraints rather than broad automated reach.

## 5 Define location, keywords, and exclusions carefully

WHY IT MATTERS

Target only realistic service areas, begin with specific commercial or booking intent, and use negative keywords to reduce research, school, jobs, salary, and irrelevant treatment traffic.

CHECK FOR

- [ ] Geography matches patient eligibility
- [ ] Keywords show useful intent
- [ ] Negative terms are prepared
- [ ] Search terms will be reviewed

QUICK TEST Would most searches represent a plausible patient?

## 6 Write factual, compliant ads and assets

WHY IT MATTERS

Describe the service, location, practitioner, title, and next step accurately. Advertise only services within scope and competence; avoid testimonials, guarantees, superiority, fear, unsupported outcomes, and specialty claims.

CHECK FOR

- [ ] Claims are factual and verifiable
- [ ] Titles and scope are accurate
- [ ] No prohibited testimonial is used
- [ ] No outcome is guaranteed

QUICK TEST Would the ad remain accurate under College review?

# Control the experiment and the downside.

An average daily budget is not a strict daily charge, and meaningful spend deserves active management.

## 7 Understand Google's spending limits

WHY IT MATTERS

For many campaigns, Google may spend up to twice the average daily budget on a day while the monthly limit is generally the daily budget multiplied by 30.4.

CHECK FOR

- [ ] Monthly limit is calculated
- [ ] Daily variability is understood
- [ ] Billing access is secured
- [ ] Alerts and review cadence are set

QUICK TEST Would the maximum monthly charge be affordable?

## 8 Start small and know when to get qualified help

WHY IT MATTERS

Use a controlled test budget, narrow scope, reliable conversion tracking, and an explicit stop rule. Get qualified help before committing material money or expanding complexity.

CHECK FOR

- [ ] Test period and budget are fixed
- [ ] Stop rule is documented
- [ ] One variable changes at a time
- [ ] Outside-support threshold is defined

QUICK TEST Can you lose the entire test budget without harming the practice?

# Learn from outcomes, not platform activity.

Clicks and automated recommendations are inputs; patient fit and business results are the decisions.

## 9 Review search terms, locations, and conversions

WHY IT MATTERS

Check what people actually searched, where useful actions came from, which devices and pages performed, and where spend produced irrelevant or unmeasured traffic.

CHECK FOR

- [ ] Search terms are reviewed
- [ ] Negative list is updated
- [ ] Location performance is checked
- [ ] Conversions are validated

QUICK TEST What spend would you deliberately avoid next month?

## 10 Build a balanced long-term traffic system

WHY IT MATTERS

Use paid traffic for controlled demand capture while improving the website, useful content, local visibility, professional referrals, and opted-in email relationships that compound over time.

CHECK FOR

- [ ] Paid and organic roles are defined
- [ ] Content supports real questions
- [ ] Referral opportunities are nurtured
- [ ] Email consent is documented

QUICK TEST Would traffic continue if ads stopped tomorrow?

# TURN THIS INTO A WORKFLOW
